The THUM can be integrated with several Home Automation   software packages.

Home Control Assistant
 Support for the THUM is built into version 7 and above. However   you will need to
download the following file and run it.   THUMHCAsetup.zip It   installs a single file on
your system which will allow the THUM to   function with HCA.
 Note: The software included with the THUM is not required when   using with HCA. The
included software should not be running if you   are using the THUM with HCA.
Here is an example of a customer using HCA and the THUM to monitor a wine room .

 To use with HCA:

 ■

Install the following file

 ■

The THUM can be added to a design using manufacturer "Practical Design   Group" and mode "THU

 ■

A right click on the device name or icon shows a "Get Temperature" menu   choice. That displays a

 ■

The Visual Programmer Thermostat Test element supports the THUM for   temperature and humidity

 ■

The Compute Visual Programmer element supports the THUM with the   _temperature and _humidit

[HomeSeer 1.7 or 2.x](#)

Support for the THUM is HomeSeer is achieved through the use of a [HomeSeer script](#) .
Note: The software included with the THUM has to be installed and   running in order for
use with HomeSeer.

Ver 1.7 - Download script and follow these   [instructions](#)

Ver 2.x - This version uses the same script as Ver 1.7. However   the interface is different
and we have not developed a guide for it yet.

[Mac XTension](#)

 Mac version of the THUM software   supports XTension as well as other Mac Home
Automation packages via   Applescript.
